REQUIREMENTS

Job postings and edit profile

Overview

When registering, the user is asked if it represents a company or an individual. Therefore, we have two points of view: the company's perspective and the individual's perspective.

From the company's perspective, the user has a series of features.

Firstly, the company is able to edit their profile information. Multiple validations are needed for this action. Besides basic profile details, the company can include a mini-game. The game consists of an interaction between the individual user and a virtual work colleague who is facing some challenges (stress, fatigue, anxiety, etc.). The user must offer advice by choosing between 3 different responses. This interaction allows the company to highlight its values regarding mental health, work-life balance and team support. This feature shall be customised by the company account, by inserting the challenge, the 3 pieces of advice and the 3 possible feedbacks, depending on the advice picked.

Furthermore, companies can see the account statistics on their profile in the "Statistics section" that will be on top of the page under their name. There, companies are able to see the completion level of their profile, represented through a progress bar. This indicates the percentage of completed profile fields, and each field contributes to the overall profile completion percentage. To assist the user, on the screen will be displayed the progress bar, and the remaining tasks required to reach 100%. In addition, the statistics section will provide a list of trending skills, extracted from the skills fields of all job posts on the platform. The system will choose the top 3 most requested skills and will display them ordered by popularity. Also, statistics regarding the amount of applicants received for job posts will be seen on the page, a short text on top of the section. The system compares the number of applicants from past months to the current month and calculates a percentage, representing the increase or decrease in applicants.

On top of this, companies shall be able to create a job post, which will later be used by the *Matchmaking Department* (UBB Frat Bros). The job has to pass a series of validation checks, and if they are successful, the job is saved. Later, the company user can edit or delete the job post. Jobs can also be scheduled to get posted whenever the user would like so, by checking a box ("Schedule post") and selecting a date in a calendar. By doing so, the job post will be private, available only to the creator, and can be modified in the meantime. When the time comes, the

job will get public to the other users. In a similar manner, companies can choose an “expiration date” for the job, meaning the job will get deleted from public view after the expiration date passes. This allows the creator to not include a deadline by hand. However, companies are required to add the skills needed for the job and a percentage, representing the minimum passing grade for the skill test created by the *Testing Department* (PowerPuff Girls). Moreover, when creating a job post, the user can choose to press a button “Pay to promote”, useful for those that would like to pay money, to promote their job post. This action will take them to a different page, requesting their card information and providing a button to confirm the payment. Additionally, this page will display a ranking board, showing the other companies that have decided to pay and their chosen sum. The promotion will be done corresponding to the ranking, so the purpose of this table is that the company will know the amount of money to pay, in order for their chosen amount of promotion. Later, if other companies exceed the sum paid by the user company, then the user must be notified of the changes from the ranking board, so they will receive an email and will be able to increase their payment. Company accounts will also have access to a page containing all the current jobs (public and private), being able to edit them, and another page consisting of all the past jobs, whose deadline has expired. For the past jobs, the creator can see a list of all the applicants. This list will contain the applicant’s unique id, their grades from the 4 steps of the appliance process: the skill tests (from the Testing Department - PowerPuff Girls), a CV screening (a quick CV scan to ensure the candidate is fit for the job), the company technical test (from the Testing Department - PowerPuff Girls) and the interview grade. If the applicant has not reached a specific stage yet, their grade will be NULL. A status will also be displayed, representing the state of the candidate: “rejected”, if the applicant has received a grade less than the minimum accepted, “accepted”, if the applicant has passed all tests and the job still has open positions, “on hold”, if the process is not yet completed, and “recommend”, if the applicant has received passing grades, but company has no positions left, therefore the company has the choice to recommend the candidate to another company, which must be a collaborator of the user company. If the company decides to recommend the applicant, they will send them an email regarding the recommendation, and also send an email to the collaborator company. If the candidate has been rejected/accepted, they will also be informed via email. When viewing past jobs, the company account can edit the job’s information and choose to repost it.

Also, companies can create events. They can add collaborators to the events, by sending them invitations. The invited companies will receive emails, informing them of the invitations. There they can choose to accept or reject them. If they do, however, decide to accept, the 2 companies will become “collaborators”. The company has access to a list of all its past events, its current events, and its collaborators.

From the individual's perspective, the user can view a company's profile by clicking on their profile photo or name, on the app's home page. This will take them to a separate page containing the company's information and a list of the company's open positions. The users can also play the mini-game, if the company has added one.

Functional requirements

1. **Profile**

   - **View profile**

     The logged-in users, which have Company accounts, by clicking on their profile icon in the top-right corner of the homepage, should be able to view their profile information: Company name, About us, Company picture(background on top of the profile), Logo picture, Location, Contact email, collaborators, posted jobs, posted events, account statistics and mini-game fields. This allows the user to view their profile exactly how another user sees it. In the top-right corner of the profile there is an edit-profile button that takes the user to edit-profile-page. Collaborators, posted jobs and posted events fields have their own add-new button and see-all button to help navigate faster to create new posts, invite new collaborators or see the whole list of entities.

   - **Edit profile**

     Companies are able to modify profile details when editing their profile:

     - ***Company name**: non-empty string
     - **About us - Company description**: text
     - **Company picture**: file format .jpg, .jpeg, .png
     - ***Logo picture**: file format .jpg, .jpeg, .png
     - **Location**: string
     - **Contact email**: string

     For mini-game:

     - **Buddy struggle**: string
     - **Response 1**: string
     - **Response 2**: string

- **Response 3**: string
- **Buddy struggle2**: string
- **Response 1**: string
- **Response 2**: string
- **Response 3**: string
- **Feedback 1**: string
- **Feedback 2**: string
- **Feedback 3**: string

❖ **Validation**

The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox's border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

This will prevent the user from saving incorrect data. Constraints:

- ***Company name**: mandatory field, non-empty string, at most 200 characters
- **About us - Company description**: optional field, text, at most 2000 characters
- **Company picture**: optional field, file format .jpg, .jpeg, .png, max size: 400 x 400 pixels
- ***Logo picture**: mandatory field, file format .jpg, .jpeg, .png, max size: 320 x 320 pixels
- **Location**: optional field, string, at most 300 characters
- **Contact email**: optional field, string, containing '@', at most 100 characters
- **Buddy struggle**: optional field, string, at most 500 characters
- **Response 1**: optional field, string, at most 200 characters
- **Response 2**: optional field, string, at most 200 characters
- **Response 3**: optional field, string, at most 200 characters
- **Buddy struggle2**: optional field, string, at most 500 characters
- **Response 1**: optional field, string, at most 200 characters

- **Response 2**: optional field, string, at most 200 characters
- **Response 3**: optional field, string, at most 200 characters
- **Feedback 1**: optional field, string, at most 200 characters
- **Feedback 2**: optional field, string, at most 200 characters
- **Feedback 3**: optional field, string, at most 200 characters

❖ **Cancel profile changes**

The system shall allow companies to cancel the profile edits, thus not saving the modifications, by pressing the “CANCEL” button at the end of the edit-profile-page. This way all company details will remain the same as before.

❖ **Cancel Confirmation**

The system will request a confirmation from the user with a pop-up, asking “Are you sure you want to cancel the modifications?”. The user can press the button “Yes”, taking them back to the homepage and not saving any changes to the database, or they can press the button “No” and the pop-up will disappear, letting the user see the edit-profile-page and continue the editing process.

❖ **Saving profile changes**

When the company user presses the “SAVE” button at the end of the edit-profile-page, and all validation checks pass, all changes made to the profile will be saved to the database, and old information will be lost/overwritten, making it impossible for the user to undo the action. After, the user will be taken back to the main page. If at least one of the validation checks fails, the user will be notified with a pop-up that at least a field is invalid. After the pop-up disappears, the user will again see the whole edit-profile-page and will be able to tell which are the invalid fields, by the border color. The user cannot save the changes until all fields are validated.

❖ **Save Confirmation**

If the user presses the “SAVE” button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

- “Profile saved”
- “We’re sorry, an error occurred. Your modifications were not saved. Please try again.”

2. The “Office Well-being” Interaction - Mini-game

The system shall include a mini-game where the user interacts with a virtual work colleague who is facing workplace challenges (stress, fatigue, etc). The user must offer advice by choosing between different responses. This reversed-role interaction allows the company to showcase its values regarding mental health, work-life balance, and team support.

❖ **Company Perspective** (owner: Delia)

Companies can customize the interaction via the "Edit Profile" dashboard by selecting or writing:

- **The Buddy’s Struggle:** The company sets two scenarios where the Buddy expresses a need (ex. "I've been debugging for 5 hours and I'm exhausted, what should I do?" or "I'm feeling overwhelmed by this new sprint planning.").
- **Supportive Responses:** For each struggle, the company provides 3 advice options (ex "Take a 15-minute walk," "Ask a senior for a pair-programming session," or "Drink another coffee").
- **Company Feedback:** After the user picks a response, the Buddy replies with the company's "philosophy" on that choice (ex "Great advice! Here at our company(company name), we believe breaks increase productivity.").

❖ **User’s Perspective** (owner: Delia)

The Encounter: The user sees the Buddy looking stressed. The Buddy asks for advice: “Hey, I'm really stuck on this task and I feel the burnout coming. Do you have any advice?"

- **The Guidance:** The user selects one of the 3 advice options.
- **The Response:** The Buddy reacts happily: "Thanks! You are a nice colleague"

    - One more question is addressed and the user chooses a response again
    - **The Positive Outro:** The game ends with a personalized motivational quote and a summary of why the user's empathy/logic makes them a great candidate for that specific IT team.
- **Validation** (owner: Delia)
    - **Mandatory Fields:** Companies must fill in both scenarios and all advice options to activate the game.
    - **Character Limits:** Struggles and advice options are limited to 250 characters to ensure readability on mobile screens.
    - **Outcome Logic:** The game always ends on a positive note to boost the candidate's confidence and make them take the company in consideration for job seeking.

3. Statistics

- **View profile progress** (owner: Tea)

  The system shall allow companies to see a statistics section, consisting of a progress bar, indicating the completion level of their profile, through a percentage. The completion progress is calculated based on the following tasks:

  - Upload profile photo
  - Add company description - About us
  - Post at least 5 job posts
  - Collaborate with at least 2 companies
  - Complete the mini-game questions

  Each completed task contributes to the overall profile completion percentage. The system should display:

  - The progress bar
  - Remaining tasks required to reach full completion
- **View trending skills** (owner: Tea)

  Companies should be able to see a list of trending skills extracted from the skills fields of all job postings on the platform. The system analyzes all job postings and determines the most frequently requested skills. The system should:

- Retrieve all skills specified in job postings
- Count the occurrences of each skill
- Determine the most frequently required skills

The statistics section displays:

- The top most requested skills
- Their ranking based on frequency

This allows companies to understand current job market demand.

❖ **View applicant statistics** (owner: Tea)

Companies should be able to view statistics about the number of applicants received for their job postings. The system compares the number of applicants from the current month with the previous months and calculates the difference. The statistics section should display the percentage increase or decrease in applicants. This feature helps companies understand changes in candidate interest over time.

4. Job Postings

❖ **View current jobs** (owner: Robert)

Companies shall be able to view a list of all their current jobs. This our-jobs-page will also give the company the opportunity to create a new job post by pressing the “Create Post” button.

❖ **Create a new job posting** (owner: Robert)

Companies shall be able to add a new job post by clicking the “Create Post” button. By doing so, it will take them to a page where they have to input the job’s details (* fields are required):

- **Photo**: file format .jpg, .jpeg, .png
- ***Job Title**: non-empty string
- ***Field**: non-empty string
- ***Type**: dropdown menu with options - can be multiple choice (part-time, full-time, volunteer, internship, remote, hybrid, etc)

- ***Experience level**: dropdown menu with options (internship, entry level, mid-senior level, director, executive)
- **Time period**: consisting of 2 date fields (start date, end date) - available only for internship posts
- ***Required skills**: dropdown menu with skills options (Python, Java, C++, etc.) and a corresponding percentage representing the minimum required knowledge for the job; these skills will later be used by the *Testing department*
- ***Job description**: non-empty text
- ***Location**: non-empty string
- ***Number of available positions**: positive integer
- **Deadline**: date

❖ **Automatic expiration date** (owner: Robert)

The system shall allow the creator to select a checkbox "Select automatic expiration date", which will provide a text box, determining the number of days before expiration. This field is for those who do not wish to add a deadline date, since it is an optional field. By selecting this check box, the post will be removed from the public after the expiration date passes.

❖ **Scheduling Post** (owner: Robert)

The system shall allow companies to schedule a posting date, by selecting a checkbox and adding a future date. This way creators can create a post and keep it private until the scheduled date comes, and the post will automatically become public.

❖ **Default fields** (owner: Robert)

When creating a new job post, certain fields will be added by default (taken from profile information, if these fields have been completed), and cannot be modified (only by editing the profile):

- Company name
- About us - Company description
- Company picture
- Logo picture
- Contact email

- **Validation** (owner: Robert)

  The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox's border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

  This will prevent the user from saving incorrect data. Constraints:

  - Non-empty strings for required fields (*)
  - Photo - file format .jpg, .jpeg, .png; max size: 400 x 400 pixels
  - *Job Title - non-empty string, at most 300 characters
  - *Field - non-empty string, at most 150 characters
  - *Type - at least 1 option picked, at most 2
  - *Experience level - exactly 1 option picked
  - *Skills - at least 1 option picked, for each option a percentage number should be chosen (integer between 1 and 100)
  - *Job description - non-empty text, at most 2000 characters
  - *Location - non-empty string, at most 300 characters
  - Number of available positions: positive integer
  - Start date < End date
  - Start date > Current date
  - Automatic expiration date > Current date
  - Automatic expiration date < Start date
  - Scheduled post date > Current date
  - Scheduled post date < Start date

- **Cancel changes** (owner: Robert)

  The system shall allow companies to cancel the job post creation, thus not posting or saving the job, by pressing the "CANCEL" button at the end of the create-post-page.

- **Cancel Confirmation** (owner: Robert)

The system will request a confirmation from the user with a pop-up, asking "Are you sure you want to cancel the modifications?". The user can press the button "Yes", taking them back to the homepage and not saving the job post to the database, or they can press the button "No" and the pop-up will disappear, letting the user see the create-post-page and continue the creation process.

- **Promotion** (owner: Aron)

  When creating/editing a job post, the user can press the "Pay to promote" button. This action will take them to a different page, where they will have to enter their card details (name, card number ,CVV, expiration date) and the money amount. Additionally, this page will display a ranking board, showing the other companies that have decided to pay and their chosen sum. The promotion will be done corresponding to the ranking, so the purpose of this table is that the company will know the amount of money to pay, in order for their chosen amount of promotion. Later, if other companies exceed the sum paid by the user company, then the user must be notified of the changes from the ranking board, so they will receive an email and will be able to increase their payment. Validations:

  - Card number has 16 digits
  - Expiration date > Current date

- **Post job** (owner: Robert)

  When the company user presses the "POST" button at the end of the create-post-page, and all validation checks pass, the job will be saved to the database and the user will be taken back to the main page. If at least one of the validation checks fails, the user will be notified with a pop-up that at least one field is invalid. After the pop-up disappears, the user will again see the whole create-post-page and will be able to tell which are the invalid fields, by the border color. The user cannot post the job until all fields are validated.

- **Automatic time stamp** (owner: Robert)

  If a post is successfully created, the date and time will be automatically stored as a field in the Jobs table.

- **Post Confirmation** (owner: Robert)

  If the user presses the “POST” button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

  - “Job created successfully”
  - “We’re sorry, an error occurred. The job was not created. Please try again.”

5. Job updates

- **Edit** (owner: Robert)

  The system shall allow company users to edit the job’s information by clicking on the 3-dots icon next to the job. This action should take them to another page. Changes should not be made to the default fields.

- **Validation** (owner: Robert)

  The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox’s border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

  This will prevent the user from saving incorrect data. Constraints:

  - Non-empty strings for required fields (*)
  - Photo - file format .jpg, .jpeg, .png; max size: 400 x 400 pixels
  - *Job Title - non-empty string, at most 300 characters
  - *Field - non-empty string, at most 150 characters
  - *Type - at least 1 option picked, at most 2
  - *Experience level - exactly 1 option picked
  - *Skills - at least 1 option picked, for each option a percentage number should be chosen (integer between 1 and 100)
  - *Job description - non-empty text, at most 2000 characters
  - *Location - non-empty string, at most 300 characters
  - Number of available positions: positive integer

- Start date < End date
- Start date > Current date
- Automatic expiration date > Current date
- Automatic expiration date < Start date
- Scheduled post date > Current date
- Scheduled post date < Start date

❖ **Cancel changes** (owner: Robert)

The system shall allow companies to cancel the job post edits, thus not saving the modifications, by pressing the “CANCEL” button at the end of the edit-post-page.

❖ **Cancel Confirmation** (owner: Robert)

The system will request a confirmation from the user with a pop-up, asking “Are you sure you want to cancel the modifications?”. The user can press the button “Yes”, taking them back to the homepage and not saving the job updates to the database, or they can press the button “No” and the pop-up will disappear, letting the user see the edit-post-page and continue the edit process.

❖ **Saving job updates** (owner: Robert)

When the company user presses the “SAVE” button at the end of the edit-post-page, and all validation checks pass, all changes made to the job post will be saved to the database, and old information will be lost/overwritten, making it impossible for the user to undo the action. After, the user will be taken back to the main page. If at least one of the validation checks fails, the user will be notified with a pop-up that at least a field is invalid. After the pop-up disappears, the user will again see the whole edit-post-page and will be able to tell which are the invalid fields, by the border color. The user cannot save the changes until all fields are validated.

❖ **Save Confirmation** (owner: Robert)

If the user presses the “SAVE” button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

- “Job updated successfully”
- “We’re sorry, an error occurred. The job was not updated. Please try again.”

❖ **Delete job post** (owner: Robert)

The system shall allow the user to delete a job, by clicking on the “Delete Job” button at the end of the edit-post-page. After doing so, the user is asked to confirm the deletion by clicking another button that appears in a pop-up: “Are you sure you want to delete this job?” providing 2 buttons “Yes” and “No”. By pressing the “Yes” button, the job is permanently removed from the database, making it an undoable action. This will take the user back to the main page. By pressing “No”, the pop-up disappears, allowing the user to continue with the updates.

❖ **Delete Confirmation** (owner: Robert)

The system will notify the user with a pop-up, if the job deletion was successful or not, by displaying a clear message:

- “Job deleted successfully”
- “We’re sorry, an error occurred. The job was not deleted. Please try again.”

6. Jobs History

❖ **View past jobs** (owner: Robert)

The system shall allow companies to view a list of all their past jobs, whose deadline has expired.

❖ **See applicants** (owner: Cipri)

The companies have a button “See applicants” for each job post, which takes them to a separate page. This page contains a table of all the applicants and their process status.

An applicant has to go through 4 stages in order to be able to get a job: the initial customized testing made by the app based on the skills required by the job, the CV review, the test made by the company for its own job, and last, the interview stage.

Each stage will be given a grade and will have an individual minimum grade requirement in order for the applicant to continue the process.
Initially, each of these grades will be given NULL values. Apart from the individual minimum requirement, they will also have a higher total minimum requirement. The total grade is calculated as the average of all the non NULL stages grades. At any point, if any of the total or individual requirement is not met, the applicant is let go and will automatically be sent an email of the rejection for the position.
For the CV stage, the company will have to extract the CV from the user profile(needs to be a .xml), that will then be validated(make sure file is reachable, contains text, contains the mandatory fields: Name, Email, Skills etc).
Once validated, the CV goes through a grading process:

- Tokenization & Cleaning: Breaking the text into individual words, removing punctuation, and stripping "stop words" (like "the", "and", "is") that don't add value to the grade.
- Vectorization (TF-IDF): It stands for Term Frequency-Inverse Document Frequency. It gives high weight to unique words (like "C#") and low weight to common words.
- Section Weighting: Give high weight to keywords found inside high value tags(like “Skills”) and lower weight to keywords found in low value tags(like “interests”).
- Synonym Mapping: A basic algorithm won't know that "C#" and "CSharp" are the same thing. You can use a Dictionary<string, string> to "normalize" terms (e.g. map["csharp"] = "c#").

If the CV is good enough, the applicant will go to the next stage, where he can take the job test. Then, for the last stage, the interview, the company will give grades manually. However, after the interview, the company still has to make their decision.
The company can:

- still "reject" the applicant even if the he passes the minimum requirements(send a rejection email)
- put the applicant "on hold", if the company isn't sure yet based on too many applicant or other factors

- "recommend" the applicant to other collaborator companies, with similar open job positions. The performance of the applicant might be very good, but might be asking for a salary out of the budget, or the company might have too many great applicants(the applicant will be sent an email with the recommended companies and the companies will receive the recommended applicant)
- "hire" the applicant(email the applicant he got the position)

❖ **Edit job** (owner: Robert)

The creator can edit a past job, by selecting the 3-dot icon next to the job. This will take them to a separate page where they can edit the job's information.

❖ **Validation** (owner: Robert)

The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox's border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

This will prevent the user from saving incorrect data. Constraints:

- Non-empty strings for required fields (*)
- Number of available positions: positive integer
- Start date < End date
- Start date > Current date
- Automatic expiration date > Current date
- Automatic expiration date < Start date
- Scheduled post date > Current date
- Scheduled post date < Start date

❖ **Repost** (owner: Robert)

When the company user presses the "REPOST" button at the end of the edit-post-page, and all validation checks pass, the job will be updated, public once again, and the user will be taken back to the main page. If at

least one of the validation checks fails, the user will be notified with a pop-up that at least one field is invalid. After the pop-up disappears, the user will again see the whole edit-post-page and will be able to tell which are the invalid fields, by the border color. The user cannot repost the job until all fields are validated.

- **Automatic time stamp** (owner: Robert)

  If a post is successfully reposted, the date and time will be automatically stored as a field in the Jobs table.

- **Post Confirmation** (owner: Robert)

  If the user presses the "REPOST" button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

  - "Job reposted successfully"
  - "We're sorry, an error occurred. The job was not reposted. Please try again."

7. Events creation

- **View current events** (owner: Carla)

  Companies shall be able to view a list of all their current events. This our-events-page will also give the company the opportunity to create a new event post by pressing the "Create Event" button.

- **View Collaborators** (owner: Carla)

  The system shall provide a button "See Collaborators" on the our-events-page, which will take the user to another page, containing a table. All past and current collaborators of the company from past and current events will appear in the table, next to a field mentioning the event that brought them together.

- **Create a new event** (owner: Carla)

  Companies shall be able to add a new event by clicking the "Create Event" button. By doing so, it will take them to a page where they have to input the event's details (* fields are required):

- **Photo**: file format .jpg, .jpeg, .png
- ***Event Title**: non-empty string
- **Event Description**: text
- ***Start date**: date
- ***End date**: date
- ***Location**: non-empty string
- **Collaborators**: other companies

❖ **Invite companies** (owner: Carla)

Towards the end of the create-event-page, the user will have the choice to invite other companies to collaborate on the event. This will be done with a search input - companies can search and select who to send invitations to.

❖ **Default fields** (owner: Carla)

When creating a new event, certain fields will be added by default (taken from profile information, if these fields have been completed), and cannot be modified (only by editing the profile):

- Company name
- About us - Company description
- Company picture
- Logo picture
- Contact email

❖ **Validation** (owner: Carla)

The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox's border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

This will prevent the user from saving incorrect data. Constraints:

- Non-empty strings for required fields (*)
- Photo: file format .jpg, .jpeg, .png; max size: 400 x 400 pixels

- *Event Title: non-empty string, maximum 200 characters
- Event Description: text, maximum 2000 characters
- Start date < End date
- *Location: non-empty string, maximum 300 characters

❖ **Cancel changes** (owner: Carla)

The system shall allow companies to cancel the event creation, thus not saving the event, by pressing the “CANCEL” button at the end of the create-event-page.

❖ **Cancel Confirmation** (owner: Carla)

The system will request a confirmation from the user with a pop-up, asking “Are you sure you want to cancel the modifications?”. The user can press the button “Yes”, taking them back to the homepage and not saving the event to the database, or they can press the button “No” and the pop-up will disappear, letting the user see the create-event-page and continue the creation process.

❖ **Post event** (owner: Carla)

When the company user presses the “POST” button at the end of the create-event-page, and all validation checks pass, the event will be saved to the database and the user will be taken back to the main page. If at least one of the validation checks fails, the user will be notified with a pop-up that at least one field is invalid. After the pop-up disappears, the user will again see the whole create-event-page and will be able to tell which are the invalid fields, by the border color. The user cannot post the events until all fields are validated.

❖ **Automatic time stamp** (owner: Carla)

If an event is successfully created, the date and time will be automatically stored as a field in the Events table.

❖ **Post Confirmation** (owner: Carla)

If the user presses the “POST” button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

- “Event created successfully”
- “We’re sorry, an error occurred. The event was not created. Please try again.”

❖ **Events History** (owner: Carla)

The system shall allow companies to view a list of all their past events, whose end date has expired. This will be displayed on a separate page, which can be accessed through the header.

8. Event updates

❖ **Edit** (owner: Carla)

The system shall allow company users to edit the event’s information by clicking on the 3-dots icon next to the job. This action should take them to another page. Changes should not be made to the default fields.

❖ **Validation** (owner: Carla)

The system shall not allow the user to enter invalid input. Therefore, when the user enters text into an input and the input gets unselected (user moves on to next input), a validation check will be performed on the exact field, and if invalid, a text will be displayed below it, mentioning the constraints in order for the user to enter a valid input and the textbox’s border will become red. If valid, no text will be displayed below it, but the border of the input will become green.

This will prevent the user from saving incorrect data. Constraints:

- Non-empty strings for required fields (*)
- Photo: file format .jpg, .jpeg, .png; max size: 400 x 400 pixels
- *Event Title: non-empty string, maximum 200 characters
- Event Description: text, maximum 2000 characters
- Start date < End date
- *Location: non-empty string, maximum 300 characters

❖ **Cancel changes** (owner: Carla)

The system shall allow companies to cancel the event post edits, thus not saving the modifications, by pressing the “CANCEL” button at the end of the edit-event-page.

- **Cancel Confirmation** (owner: Carla)

  The system will request a confirmation from the user with a pop-up, asking "Are you sure you want to cancel the modifications?". The user can press the button "Yes", taking them back to the homepage and not saving the event updates to the database, or they can press the button "No" and the pop-up will disappear, letting the user see the edit-event-page and continue the edit process.

- **Saving event updates** (owner: Carla)

  When the company user presses the "SAVE" button at the end of the edit-event-page, and all validation checks pass, all changes made to the event post will be saved to the database, and old information will be lost/overwritten, making it impossible for the user to undo the action. After, the user will be taken back to the main page. If at least one of the validation checks fails, the user will be notified with a pop-up that at least a field is invalid. After the pop-up disappears, the user will again see the whole edit-event-page and will be able to tell which are the invalid fields, by the border color. The user cannot save the changes until all fields are validated.

- **Save Confirmation** (owner: Carla)

  If the user presses the "SAVE" button and all fields are valid, the system will notify them with a pop-up to confirm success or not, by displaying a clear message:

  - "Event updated successfully"
  - "We're sorry, an error occurred. The event was not updated. Please try again."

- **Delete event post** (owner: Carla)

  The system shall allow the user to delete an event, by clicking on the "Delete event" button at the end of the edit-event-page. After doing so, the user is asked to confirm the deletion by clicking another button that appears in a pop-up: "Are you sure you want to delete this event?" providing 2 buttons "Yes" and "No". By pressing the "Yes" button, the event is permanently removed from the database, making it an undoable

action. This will take the user back to the main page. By pressing “No”, the pop-up disappears, allowing the user to continue with the updates.

- **Delete Confirmation** (owner: Carla)

  The system will notify the user with a pop-up, if the event deletion was successful or not, by displaying a clear message:

  - “Event deleted successfully”
  - “We’re sorry, an error occurred. The event was not deleted. Please try again.”

Non-functional requirements

Performance

The system must respond to user actions (such as view profile, edit profile, create post, cancel job post, save job post) under 1 second.

Usability

Profile editing should be simple and effective, and be performed in under 5 user actions.

Job posting should be an easy and useful action to the company user.

Reliability

The system should not lose data in profile editing or job posting processes.

Security

Company profile information (such as email and password) should be encrypted.
